About me

Senior Software Engineer building backend systems for high-stakes banking, fintech, and e-commerce environments. JVM-focused (Kotlin/Java), strong in Kafka-driven architectures, SQL/data integrations, Clean Architecture, DDD, TDD/BDD, Docker, CI/CD, and performance-sensitive distributed systems. I use Spec-Driven Development and AI engineering workflows to reduce scaffolding time and keep complex integrations aligned with business rules.

Core Skills

Backend/Data: Java, Kotlin, Python, SQL, Spring Boot, Apache Kafka, Apache Camel, BigQuery, Oracle DB, PostgreSQL, Neo4j

Architecture/Delivery: Distributed Systems, Event-Driven Architecture, Hexagonal Architecture, DDD, TDD/BDD, Docker, Kubernetes, GitLab CI, GitHub Actions, Observability, AI-assisted SDD

Experience

Senior Software Engineer (L4) | System Analyst, GFT Technologies – Valencia, Mar 2023 – Present Spain

Banking transformation projects for top-tier European financial institutions: currently BBVA, previously Deutsche Bank CLM.

- At Deutsche Bank CLM, built Spring Boot and Kafka services and established architecture patterns later adopted as team standards.
- Design microservices with Clean Architecture and DDD, translate regulatory requirements into technical specs, and mentor developers on SOLID and TDD.
- Lead workshops on event-driven architecture and Kafka patterns while driving CI/CD adoption across complex delivery cycles.
- Built an AI engineering harness with OpenCode agents, subagents, MCPs, prompt libraries, and SDD workflows, cutting boilerplate scaffolding by ~60%.
- Reduced average feature delivery time by 30%, established coding standards across 4 project teams, and delivered 6 compliance features ahead of deadline.

Tech: Kotlin, Java, Spring Boot, Spring WebFlux, Apache Camel, Kafka, PostgreSQL, Oracle DB, Docker, Kubernetes, AWS, OpenCode, AI Agent Orchestration

Software Engineer | Kotlin & Java Backend Developer, Mercado Libre – Feb 2021 – Mar 2023 Montevideo, Uruguay

- Built internal APIs for malicious-behavior detection across MercadoLibre and MercadoPago login/registration flows processing 3M+ daily authentication events.
- Designed risk policies and scoring systems to identify fraudulent account activity in real time, reducing fraudulent registrations by 22%.
- Improved detection latency by 40% through API refactoring, caching optimization, and reliability testing.

Tech: Java, Kotlin, Spring Boot, Vert.x, BigQuery, SQL, Git, Docker

Senior Software Engineer | Java Backend Developer, Scanntech – Montevideo, Dec 2019 – Feb 2021 Uruguay

- Reduced synchronization time between platform APIs and MMC from ~40 minutes to ~6 minutes.
- Designed a centralized configuration pattern for platform microservices and improved deployment reliability with GitLab CI.
- Maintained and optimized high-traffic APIs across retail market integrations with stronger tests and SOLID practices.

Tech: Java, Spring Boot, Kafka, Zookeeper, PostgreSQL, SQL, GitLab CI, Docker

Software Architect, Desoft – Ciego de Ávila, Cuba

Sep 2016 – Dec 2019

- Designed a microservices-based online reputation management system and guided service decomposition.
- Mentored the team on microservices, Kubernetes, Istio, and infrastructure practices.

Tech: Java, Spring Boot, REST, SQL, PostgreSQL, Kubernetes, Istio, Docker, Linux

Full Stack Developer | Junior Web Developer, Desoft – Ciego de Ávila, Cuba

Sept 2016 – Apr 2019

- Developed internal REST APIs and web interfaces with Angular/Vue, TypeScript, Java, PHP, and Python.
- Improved site performance, fixed production defects, and supported cross-browser responsive delivery.

Tech: Java, PHP (Laravel), Python (Flask), Angular, Vue.js, TypeScript, SQL, PostgreSQL, Linux

Languages

Spanish: Native **English:** B2

Projects

Corvus – Autonomous AI agent framework in Kotlin and Rust

Current

- Provider-agnostic framework for long-running AI orchestration, deploy-anywhere workflows, and chat-platform integrations.

Profile Tailors – Multi-channel content distribution SaaS

Current

- SaaS project using Spring Boot, Kotlin, WebFlux, and content automation workflows.

Education

Bachelor in Computer Science, Central University "Marta Abreu" of Las Villas

Sept 2012 – Jul 2017

- Relevant Courses: Artificial Intelligence, Databases, Algorithms, Data Structures, Compilers, Software Engineering
